

## TabLayout & ViewPager2 Kotlin

1

## TabLayout & ViewPager2

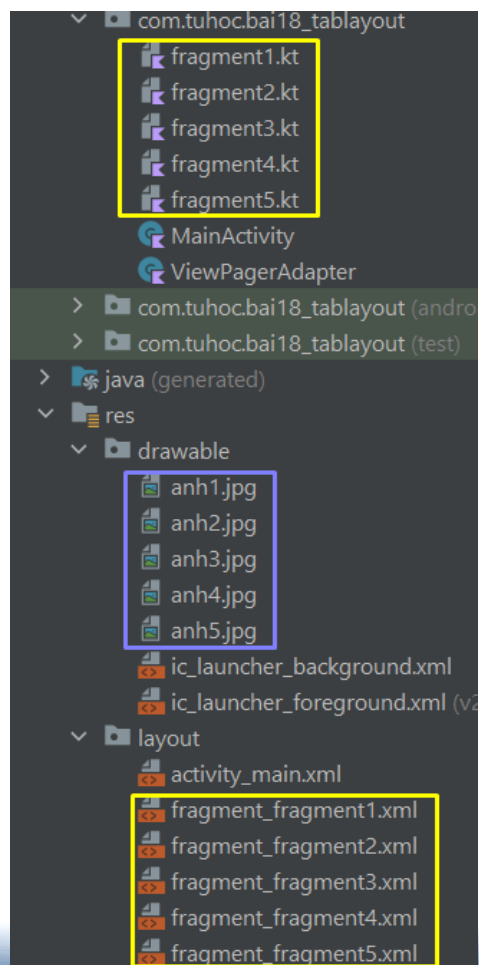

❑ Add tablayout, viewpager2 vào giao diện :

1

## TabLayout & ViewPager2

### 2. Step 1- tạo các fragments– Đưa hình ảnh vào drawable:

Ảnh để trong drawable  
và code toàn bộ bài 18  
Pass unrar : **tuhoc180**

## TabLayout & ViewPager2

❑ step 1. Code trong fragments :

fragment\_fragment1.xml

```
<?xml version="1.0" encoding="utf-8"?>
<FrameLayout xmlns:android="http://schemas.android.com/apk/res/android"
    xmlns:app="http://schemas.android.com/apk/res/app"
    xmlns:tools="http://schemas.android.com/tools"
    android:layout_width="match_parent"
    android:layout_height="match_parent"
    tools:context=".fragment1">

    <ImageView
        android:id="@+id/imageView"
        android:layout_width="match_parent"
        android:layout_height="match_parent"
        android:adjustViewBounds="true"
        android:scaleType="centerCrop"
        android:src="@drawable/anh1" />

</FrameLayout>
```

fragment1.kt

```
class fragment1 : Fragment(R.layout.fragment_fragment1) {
}
```

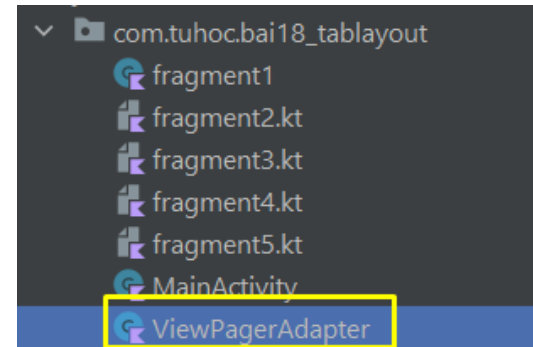

1

## TabLayout & ViewPager2

### ❑ 3. Step 2- tạo class Adapter:

```
class ViewPagerAdapter(fragmentManager: FragmentManager, lifecycle: Lifecycle):  
    FragmentStateAdapter(fragmentManager, lifecycle) {  
    //ctrl + i  
    override fun getItemCount(): Int {  
        return 5  
    }  
    override fun createFragment(position: Int): Fragment {  
        return when(position){  
            0->{  
                fragment1()  
            }  
            1->{  
                fragment2()  
            }  
            2->{  
                fragment3()  
            }  
            3->{  
                fragment4()  
            }  
            else->{  
                fragment5()  
            }  
        }  
    }  
}
```

1

## TabLayout & ViewPager2

### 3. Step 3- Code MainActivity:

```
class MainActivity : AppCompatActivity() {
    override fun onCreate(savedInstanceState: Bundle?) {
        super.onCreate(savedInstanceState)
        setContentView(R.layout.activity_main)
        val adapter = ViewPagerAdapter(supportFragmentManager, lifecycle)
        pagerTest.adapter = adapter
        TabLayoutMediator(tabDemo, pagerTest){tab, position ->
            when(position){
                0->{
                    tab.text="Tab1"
                }
                1->{
                    tab.text="Tab2"
                }
                2->{
                    tab.text="Tab3"
                }
                3->{
                    tab.text="Tab4"
                }
                4->{
                    tab.text="Tab5"
                }
            }
        }.attach()
    }
}
```
