Listview nâng cao

1. Vẽ layout cho 1 dòng : Thiết kế list_item.xml

Component Tree
■ CardView
🔼 images
➤ 🗏 LinearLayout (vertical)
Ab title "Title"
Ab desc "desc"

☐ 1. Vẽ layout cho 1 dòng : Thiết kế list_item.xml

```
<?xml version="1.0" encoding="utf-8"?>
<androidx.cardview.widget.CardView xmlns:android="http://schemas.android.com/apk/res/android"</pre>
   android:layout_width="match_parent"
    android:orientation="vertical"
    android:layout_marginTop="0.5dp"
    android:layout_height="130dp">
    <ImageView
        android:layout_width="120dp"
        android:layout_height="120dp"
        android:layout_marginTop="5dp"
        android:layout_marginLeft="5dp"
        app:srcCompat="@drawable/ic_launcher_background" />
    <LinearLayout
        android:layout_width="match_parent"
        android:layout_height="wrap_content"
        android:layout_marginStart="130dp"
        android:orientation="vertical">
        <TextView
            android:layout_width="match_parent"
            android:layout_height="wrap_content"
            android:layout_marginTop="5dp"
```

1

Listview nâng cao

2 . Tạo Class Out Data để định hình các phần tử trong 1 view

```
val image:Int,
val title: String,
val desc:String){
```

□ 3 . Tạo CustomAdapter : Class Adapter tuỳ chỉnh

```
📑 app

    com.tuhoc.bai84_listviewnangcao_bancuoi

            CustomAdapter
           MainActivity
class CustomAdapter(val activity: Activity, val list: List<OurData>):ArrayAdapter<OurData>(activity,R.layout.list_item) {
    override fun getCount(): Int {
    override fun getView(position: Int, convertView: View?, parent: ViewGroup): View {
        val rowView = contexs.inflate(R.layout.list_item,parent, attachToRoot: false)
        val images= rowView.findViewById<ImageView>(R.id.images)
        val title = rowView.findViewById<TextView>(R.id.title)
        val desc = rowView.findViewById<TextView>(R.id.desc)
        title.text = list[position].title
        desc.<u>text</u> = list[position].desc
        images.setImageResource(list[position].image)
        return rowView
```

4. Code MainActivity

```
✓ □ java

✓ □ com.tuhoc.bai84_listviewnangcao_bancuoi

← CustomAdapter

← MainActivity

← OurData
```

```
class MainActivity : AppCompatActivity() {
lateinit var customAdapter: CustomAdapter
    override fun onCreate(savedInstanceState: Bundle?) {
        super.onCreate(savedInstanceState)
        setContentView(R.layout.activity_main)
        var list = mutableListOf<OurData>()
        list.add(OurData(R.drawable.giatocrong, title: "Gia Tộc Rồng 2022", desc: "Gia Tộc Rồng xoay qua
        list.add(OurData(R.drawable.hoanhon, title: "Hoàn Hồn 2022", desc: "phim giả tưởng"))
        list.add(OurData(R.drawable.thanlan, title: "Thần Lan Vô Song", desc: "phim kiếm hiệp"))
        list.add(OurData(R.drawable.banghoa, title: "Băng Hỏa Ma Trù 2021", desc: "Băng Hỏa Ma Trù"))
        customAdapter = CustomAdapter( activity: this, list)
        val lvPhim = findViewById<ListView>(R.id.lvPhim)
        lvPhim.adapter = customAdapter
```

□ 5. list view item click listener
